

## **Vertical Projectiles [C]**

A ball is shot upward from the top of a 260 m cliff with an initial velocity of 45 m/s. After reaching its peak, the ball falls such that it just misses the edge of the cliff and lands at the base of the cliff. ("Up" is positive)

1.	How much time does it take the ball to reach its peak?	
2.	How high above the base of the cliff is this peak?	
3.	What is the ball's <u>velocity</u> 10 seconds after it is shot?	
4.	What is the hell's acceleration 2 5 seconds often it is shot?	
4.	What is the ball's <u>acceleration</u> 2.5 seconds after it is shot?	
5.	What is the ball's <u>velocity just</u> as it passes the edge of the cliff	
	on the way down?	
6.	What is the ball's maximum positive <u>velocity</u> ?	
0.	what is the sair s maintain positive <u>veisory</u> .	
7.	What is the ball's maximum negative <u>velocity</u> ?	
8.	What is the ball's displacement 10 seconds into the flight?	
0.	what is the ban's displacement to seconds into the hight?	
9.	What is the ball's <u>velocity</u> at the peak?	
10		
10.	What is the ball's <u>acceleration</u> at the peak?	
11.	What is the ball's <u>displacement</u> for the entire flight?	
12.	What distance did the ball travel for the entire flight?	
13.	What is the ball's <u>velocity</u> the instant before hitting the ground?
