W1.08C

Vertical Projectiles [C] KEY

A ball is shot upward from the top of a 260 m cliff with an initial velocity of 45 m/s. After reaching its peak, the ball falls such that it just misses the edge of the cliff and lands at the base of the cliff. ("Up" is positive)

1.	How much time does it take the ball to reach its peak?	<u>4.5 sec</u> .
2.	How high above the base of the cliff is this peak?	<u> </u>
3.	[101.25 m + 260 m] What is the ball's <u>velocity</u> 10 seconds after it is shot?	<u>-55 m/s</u> .
4.	What is the ball's <u>acceleration</u> 2.5 seconds after it is shot?	<u>-10 m/s² .</u>
5.	What is the ball's <u>velocity</u> just as it passes the edge of the cliff on the way down?	<u>-45 m/s</u> .
6.	What is the ball's maximum positive <u>velocity</u> ?	<u>+45 m/s</u> .
7.	What is the ball's maximum negative <u>velocity</u> ? [same as #13]	-85 m/s .
8.	What is the ball's displacement 10 seconds into the flight?	<u>-50 m .</u>
9.	[?s=v(t) so -5 m/s x 10s] What is the ball's <u>velocity</u> at the peak?	<u>0 m/s</u> .
10.	What is the ball's <u>acceleration</u> at the peak?	<u>-10 m/s² .</u>
11.	What is the ball's <u>displacement</u> for the entire flight?	<u>-260 m .</u>
12.	What distance did the ball travel for the entire flight?	<u>462.5 m</u> .
13.	[101.25 m + 101.25 m + 260 m] What is the ball's <u>velocity</u> the instant before hitting the ground? $[(v_f)^2 = (v_0)^2 + 2a?s \text{ so } v_f = \pm 85 \text{ m/s}]$	-85 m/s .
