## W3. 15

## F = ma Systems - Key

Find the acceleration of the system and tensions in all ropes. All systems accelerate from rest. [1]

$\mathrm{a}=1 \mathrm{~m} / \mathrm{s}^{2} 30-\mathrm{kg}$ down incline, 12-kg up incline
$\mathrm{T}=120 \mathrm{~N}$
[2]

a. Find a. $\quad 2 \mathrm{~m} / \mathrm{s}^{2}$ down the incline/up
b. Find T. $\quad 12 \mathrm{~N}$
c. How far does the 3 kg block slide in 2 seconds? 4 m
d. How high should $\mu$ be to let the 3 kg block slide down at a constant v? 0.5
[3] A car, initially at traveling at $30 \mathrm{~m} / \mathrm{s}$, slides to a stop. What $\mu$ is required for the car to stop in 75 meters?

$$
\mu=0.6
$$

[4]

The 2-kg mass accelerates from rest. It falls 8 meters in the first 4 seconds. What is the mass of block M ? M $=6 \mathrm{~kg}$
